Performance...

TREMCO BARRIER SOLUTIONS

RAISING THE LEVEL OF WATERPROOFING PERFORMANCE AGAIN!

Delivering Up to
8 TIMES GREATER
Resistance to Hydrostatic Head Pressure –
and Keeping Basements Dry!

BY DEFINITION

building code requires foundation waterproofing to resist water under hydrostatic head pressure. Tremco Barrier Solutions is revolutionizing the foundation waterproofing category by delivering unparalleled resistance to hydrostatic head pressure with our newest formulations of polymer-modified asphalt waterproofing membranes.

WATERPROOFING:

“THE ABILITY OF A MEMBRANE
TO PREVENT MOISTURE
UNDER HYDROSTATIC PRESSURE
TO PENETRATE A SURFACE”

1

It All Starts With Hang Strength

- **Hang strength** = the ability of a spray-applied waterproofing membrane to stay on the wall where it's sprayed, and not run or bleed down the wall before curing.
- **Reliable waterproofing performance** = a consistent cured thickness of 40 mils across the entire foundation wall.
- **Poor hang strength = poor performance in keeping basements dry**

Tremco Barrier Solutions membranes stay where they're sprayed...the membrane adheres to the wall and doesn't slide down to the footer, unlike many competitive membranes.

This exceptional hang strength delivers outstanding protection over the entire surface of the wall.

2

Flexibility Matters... Especially Under Pressure

Most waterproofing membranes perform their basic function well on a smooth foundation wall. But concrete walls are bound to crack, and the real test of **performance under pressure** is a membrane's ability to keep water out when spanning a shrinkage crack.

Tremco Barrier Solutions membranes are designed to span cracks up to 1/16" and still maintain their strength and integrity, and to keep water from entering your foundation wall.

3

Performance Under PressureSM!

Every gallon of Tremco Barrier Solutions waterproofing membrane now delivers up to 8 TIMES better hydrostatic head resistance than competitive waterproofing brands – up to 8 FEET of hydrostatic head resistance! No other polymer-modified asphalt emulsion comes close to the protection that Tremco Barrier Solutions brands deliver.

- **Stops water** under hydrostatic head pressure over shrinkage cracks in the foundation wall
- **Keeps walls protected**, even when drainage systems fail
- **Delivers added performance** and peace of mind
